

Tail Lift Charger for Trailer

The Thermo King Tail Lift Charger is an independent unit that charges the batteries (2 X 12 V in series) on the tail lift of a trailer unit, using the reefer units' alternator. The independent charger converts a 12V supply to 24V-needed for tail lift electric motor models. The unit has been designed to give priority to the reefer unit, and is independent of the pulley drive systems. Lower power = lower fuel consumption. The Tail Lift Charger will only function when the reefer unit is in operation, ensuring the protection of your reefer battery. It allows customers to operate tail lift and lights anytime and anywhere when the tractor is not connected.

Key Features

- Power for tail lift batteries from reefer unit
- Power for internal lighting through tail lift
- Configured with 2 chargers for longer life & lower power consumption
- A safer and more reliable method of charging than retrofit alternative
- Quick and easy installation across different models
- Enclosure box IP rated and vibration resistant
- Only operates when reefer unit is running

DESCRIPTION	PART NO
24V Tail Lift Battery Charger	401158
120 alternator	401235
Harness kit 9 metres	401012
Harness kit 14 metres	401176
Harness kit 18 metres	401013
